Morphismes de Peirce et orthogonalité dans les algèbres de Bernstein. (French. French summary) [Peirce morphisms and orthogonality in Bernstein algebras] *Linear Algebra Appl.* **219** (1995), 179–186.

Summary (translated from the French): “We study the link between the Peirce transformations (notation transport) and automorphisms (structure transport) of a Bernstein algebra of order 1. We conclude with some reflections on orthogonality and ‘non’-orthogonality in dimension 6.”
