
MR1755351 (2001c:17046) 17C70**Martínez, C. [Martínez López, Consuelo] (E-UO)****Jordan superalgebras.**

Nonassociative algebra and its applications (São Paulo, 1998), 211–218, *Lecture Notes in Pure and Appl. Math.*, 211, Dekker, New York, 2000.

The author gives a survey of what is known concerning the classification of simple Jordan superalgebras, in particular the finite-dimensional case and the \mathbf{Z} -graded case when the dimensions of the components are uniformly bounded. He provides many examples and also discusses techniques used in the classification. He concludes with a discussion of the modular case and with a conjecture.
