

Welcome to the UCI Math Department New Student Orientation!

Presented by:

- Dr. Christopher Davis
- Dr. Yifeng Yu

Possible guest stars: Dr. Alessandra Pantano, Dr. Zhiqin Lu
September 26, 2023

UCI IRVINE | DEPARTMENT OF
MATHEMATICS

Outline

Introduction
to the Math
Major

Tips for
Success

How to get
Involved

Who are you?

- Math major?
- Undecided?
- Freshman?
- Transfer student?

The UCI Department of Math has approximately:

- 750 undergraduates
- 120 graduate students
- 45 permanent faculty

Why be a Math Major?

What's the most useful skill you learn?

The ability to reason precisely and logically

Corollary 1: Proof writing is important for all of you!

Corollary 2: Math 13 is probably the most critical class for your success as a math major

Seven Tracks in the Math Major

Pure Mathematics

Data Science

Math Finance

Applied and
Computational Math

Math Biology

Math Education

Math
Education/Secondary
Teacher Certification

Tracks in the Math Major

- You typically apply in your sophomore or junior year
- No application necessary for the Pure Math Major (the default)
- Some courses should be taken in your sophomore year at the latest

Which track is right for which career?

(Hint: There's no right answer!)

Work in AI? Data Science or Applied and Computational Math

Be an Actuary? Math Finance

Work at a Medical Research Lab? Math Biology

Be a Math Teacher? Math Education

Pure Math Major offers the most freedom to choose electives

How do classes work?

Usually...

- **5** meetings per week: 3 lectures and 2 discussion sections each week
- **1** (cumulative) final exam: 35-40% of the course grade
- **1** or **2** midterms
- Weekly homework (not always graded)
- Quizzes (almost each week)

What's the point of Homework?

- Helps you know what the professor thinks is important
- Practice (it's crucial)
- Keeps you on pace with the class

Study tips 1

INTERMEDIATE VALUE THEOREM.

If f is a function that is continuous over the interval $[a, b]$ and m is some number between $f(a)$ and $f(b)$, then there exists a number c between a and b such that $f(c) = m$.

- The midterms and finals are testing understanding
- To succeed in your classes, **memorization is not enough**
- **Repetition is *not* an effective study** method
- Repetition might help you remember that the derivative of $\cos(x)$ is $-\sin(x)$. But it won't help you understand what the derivative means
- **Instead:** Try to make flash cards, rewrite theorems in your own words, write your own practice questions, ask why hypotheses are necessary, try to find examples
- For online courses: Do the computations yourself and take notes while watching the videos

Study tips 2

- UCI is on the quarter system, so the **pace is very fast**. Don't fall behind!
- **Go to office hours**. If you're concerned about your grade, talk to the professor and TA early, not after the final exam.
- Expect to **read the textbook**. Not everything will make sense in lecture the first time you hear it.
- Pay special attention to **definitions**, make sure you understand them. Find examples.
- Most people learn better reading from a physical book than from a screen.

**Getting the most
out of your college
experience**

Tips if you want to start Math Research

- No easy path, especially as freshmen
- Math 199 (sometimes it's research, often it's directed reading)
- Get to know your professors: *Attend office hours! Ask questions! (LORs)*
- In your junior year: check out Summer REUs, Research Experiences for Undergraduates (all over the United States)
- Interested in math and bio research? Take Math 113 and apply to MathBioU in the summer between your junior and your senior year

Meet more majors and get involved!

Undergraduate Math Committee

Math CEO

UCI Actuarial Society

Math Finance Club at UCI

Data @ UCI

Undergraduate Mathematics Committee (UMC)

UCI's hub for math enthusiasts to collaborate, learn, and grow.
