MR1483517 (99d:17033) 17D92
Structure of Bernstein populations of type \((3, n - 3)\). (English summary)
Linear Algebra Appl. 269 (1998), 17–32.

Summary: “This paper describes explicitly all simplicial stochastic nonregular nonexceptional Bernstein algebras of type \((3, n - 3)\). Consequently, the Bernstein problem of type \((3, n - 3)\) is settled, since the regular and exceptional cases have already been done.”
