1. Suppose that $X_{n} \rightarrow X$ in probability and $X_{n} \rightarrow Y$ in probability. Show that $X=Y$ a.s. (almost surely).
2. Give an example showing that convergence in distribution does not always imply convergence in probability.
3. Assume that $X_{n} \rightarrow X$ in probability. Suppose that there exists $M>0$ such that for every $i$, we have $\left|X_{i}\right| \leq M$ a.s. Show that for any continuous function $f: \mathbb{R} \rightarrow \mathbb{R}$, one has

$$
f\left(X_{n}\right) \rightarrow f(X) \quad \text { in probability } .
$$

4. Complete the proof that convergence in probability implies convergence in distribution, which we gave in class. Namely, show that if $X_{n} \rightarrow X$ in probability then

$$
\liminf _{n} F_{n}(a) \geq F(a)
$$

for every point $a$ of continuity of $F(x)$. Here $F_{n}(x)$ denotes the CDF of $X_{n}$ and $F(x)$ denotes the CDF of $X$.
5. Let $Z \sim N(0,1)$. Show that, for every $a \geq 0$,

$$
\mathbb{P}\{|Z| \leq a\}=2 \Phi(a)-1
$$

where $\Phi(x)$ denotes the CDF of $Z$.
6. The ideal size of a first-year class at a particular college is 150 students. The college, knowing from past experience that, on the average, only $30 \%$ of those accepted for admission will actually attend, uses a policy of approving the applications of 450 students. Approximate the probability that more than 150 first-year students attend this college.

A table of the CDF of the standard normal distribution is attached.
7. Suppose that $65 \%$ of the population of a large community is in favor of a proposed raise in school taxes. Approximate the probability that a random sample of 100 people will contain between 60 and 70 inclusive who are in favor.

A table of the CDF of the standard normal distribution is attached.

Table A.3. The Cumulative Distribution Function for the Standard Normal Distribution: Values of $\Phi(z)$ for nonnegative $z$

| $z$ | 0.00 | 0.01 | 0.02 | 0.03 | 0.04 | 0.05 | 0.06 | 0.07 | 0.08 | 0.09 |
